

Are you thinking about VDI?

Planning

Assess • Design • POC

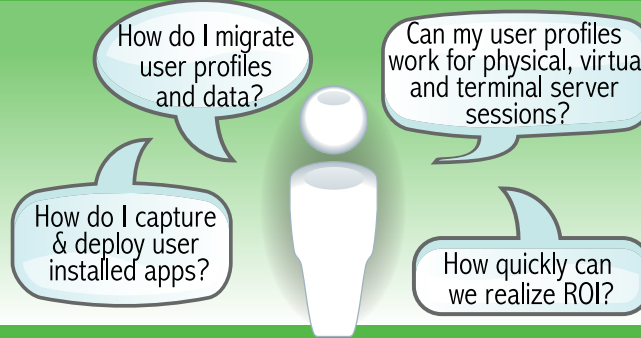

Stratusphere FIT allows you to assess and baseline your user experience, applications and infrastructure, so you can find more VDI compatible users, lower implementation and ongoing maintenance costs, and provide a better overall experience.

- Assess and baseline users, applications and infrastructure
- Measure endpoint to datacenter network latency
- Rate user & applications fitness levels: Good/Fair/Poor
- Capacity plan CPU, Memory & IOPS per application
- Design optimum shared image strategy
- Create remediation plans before you migrate desktops

Similar Point Products:

Lakeside, VMware Capacity Planner

Are you migrating to VDI?

On-Boarding

Migrate • Automate • Deploy

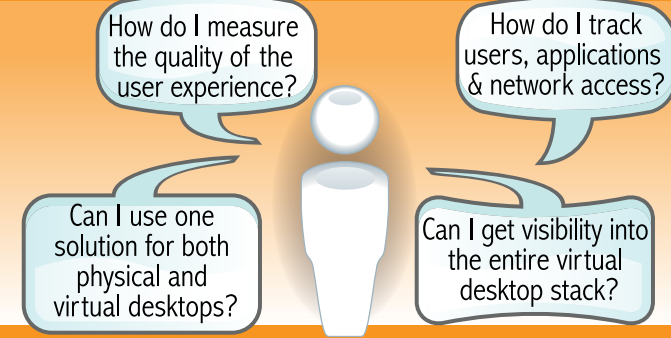

ProfileUnity delivers a smooth transition from legacy PC's by decoupling the OS and by background migrating user settings and data into the datacenter. ProfileUnity enables centralized context-aware administration of user persona for application provisioning across physical, virtual and terminal service sessions.

- Enable shared image, stateless deployments
- Decouple user preferences & data from OS
- Migrate & redirect user data folders to LAN
- Manage user profile & admin policy, shortcuts, drives, and Thinapps
- Deliver 'follow-me' settings & applications
- Access across both physical & virtual desktops
- Compatible between Windows XP/2003/7/2008
- Deliver VDI & legacy desktop access during migration

Similar Point Products:

AppSense, RES, RingCube

Have you deployed VDI?

Production

Scale/Validate • Optimize • Manage

Stratusphere UX provides in-depth visibility across the infrastructure from the desktop to the datacenter, so you can validate and diagnose user experience and report on security and compliance at the user, application and network protocol layers. Stratusphere UX supports a wide range of Windows and Linux servers and desktops, including leading platforms from VMware, Citrix, Microsoft and RedHat.

- Provide Read-Only visibility to desktop administrators
- Rate user experience with simple Good/Fair/Poor categories & VDI UX composite metric methodology
- Measure login delay, applications launch delay & application not responding messages (ANR)
- Measure desktop-to-server app response time (ART)
- In-depth network protocol & PCoIP session visibility
- Identify over-provisioned licenses and resources
- Supports physical, virtual, Windows, Linux from endpoint to datacenter

Liquidware Labs Desktop Transformation Suite

About Liquidware Labs

Founded in 2009, Liquidware Labs™ is the leader in desktop transformation solutions for next-generation physical and virtual desktops, including VMware® View, Citrix® XenDesktop, and Microsoft® Windows 7. The company's Stratusphere™ and ProfileUnity™ solutions have been described by analysts as the industry's first 'On-Ramp to VDI,' providing a complete methodology and software that enables organizations to decouple users and applications from the operating system and to cost-effectively plan, migrate, manage and validate the user experience for next-generation desktop infrastructure. Liquidware Labs products are VMware and Citrix certified, and are available through a global network of certified partners.

Four Key Phases of Virtual Desktop Deployment

Liquidware Labs Products

VDI Essentials Bundle

Liquidware Labs Stratusphere FIT, ProfileUnity and Stratusphere UX are available with very affordable bundle pricing that can save you as much as 30% over the cost of buying products separately. These award-winning solutions are used by the largest systems integrators, professional services organizations, and enterprise desktop support teams to navigate through the critical phases of desktop transformation.
